

## Site Waste Management

We optimise the waste disposal processes of your site.

Reduced waste disposal costs and greater yield of valuable materials – optimising site waste management is often well worth the effort. We analyse your waste management system, and develop a custom-tailored concept for you for improved material flows. While doing so, we also guarantee your legal compliance with respect to applicable environmental protection laws, as well as legally required evidences and approvals. Moreover, care is taken of the practical implementation of our recommendations, and the training of your employees. To unburden you even further, we can also take over accounting for all of your outsourced contracts.

### Our Services

1. We visit your site and analyse your waste management systems.
2. We evaluate your existing disposal processes and outsourced contracts.
3. We develop an optimised, custom-tailored waste management concept for you.
4. We train your employees.
5. We take over accounting for all of your outsourced contracts.
