

## Weighing of Packaging

We determine the correct weights according to material fractions.

Correct data prevents unpleasant surprises. We are specialists in weighing the individual components of your packaging according to material fractions, and then we determine which of your packagings are subject to recovery. We are thus able to guarantee that the reporting and accounting for your particular dual system or industry solution is done with correct values. For certification purposes, we commission independent specialists with the weighing. You will then receive weighing records that serve as evidence for auditors and authorities that the weights have been correctly determined.

### Our Services

1. We check the packaging weights and material fractions.
2. We commission an expert to certify correct weighing.
3. We prepare weighing records.

### Your Benefits

- ✓ Weighing on calibrated scales
- ✓ Weighing in accordance with the DIN Technical Report: "DIN SPEC 11516 Weight Determination of Retail Packaging – Physical Weighing (04/2014)"
- ✓ Assurance that accounting and reporting are done with the correct weights
- ✓ Evidence records of correct weight determination as required by auditors and authorities
